# BT Garden LTD works where outdoor design meets real site conditions.

Outdoor construction is usually shaped by slope, water flow, soil, access, load and how the finished area will be used. The work starts with understanding the site before locking in the scope.

---

## Established 2018

Auckland local business working with homeowners and small commercial clients.

---

## SiteWise Green

Safety-aware project planning for outdoor construction environments.

---

## LBP builder capability

Decks, retaining, access and structural details can be checked with practical build knowledge.

---

## Excavator operation

Earthworks, access, base preparation and drainage can be considered alongside the finished build.

---

## English + 中文

English-first communication with Chinese support where helpful for clients.

# One site can involve concrete, drainage, retaining, access and finishing work.

The value is in sequencing the work correctly: prepare the ground, control water, build the structure, then finish the surface or outdoor area cleanly.

01

## Driveways & access areas

混凝土车道 / 停车位 / 出入口

Concrete driveways, parking pads, entry slopes, edging, drainage channels and base preparation.

02

## Retaining walls

木挡土墙 / 砌块 / Keystone

Timber, block, modular and Keystone retaining walls planned around height, water, soil and access.

03

## Earthworks & drainage preparation

土方 / 挖机 / 排水准备

Excavation, levelling, trenching, backcut, spoil handling and practical site shaping.

04

## Decks, fences & garden construction

Deck / 围栏 / 花园硬景

Decks, stairs, privacy screens, timber fences, gates, paths, edging and usable garden spaces.

05

## Resin-bonded decorative surfacing

树脂撒石地坪 / 车道防滑面层

Thin anti-slip decorative stone overlay for prepared concrete or asphalt. Not a structural layer and not a permeable resin-bound system.

# Project examples across hard landscaping and access construction.

Recent work includes concrete access areas, timber retaining, deck and fence details, and garden paths.

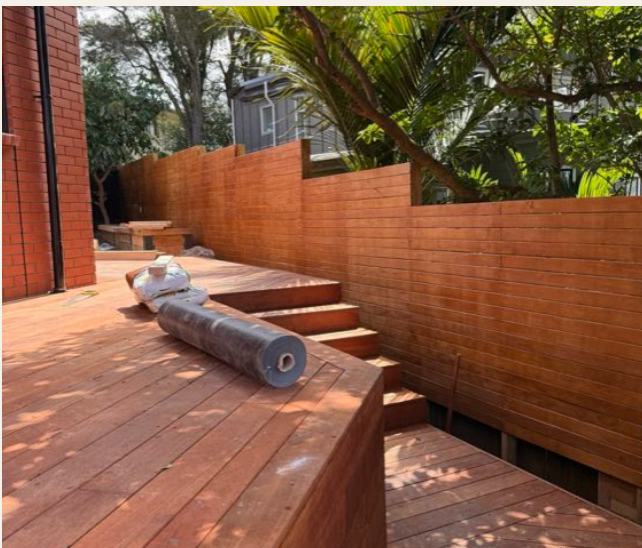

## Driveway and hardstand areas

Concrete areas planned around vehicle access, levels, drainage and finish.

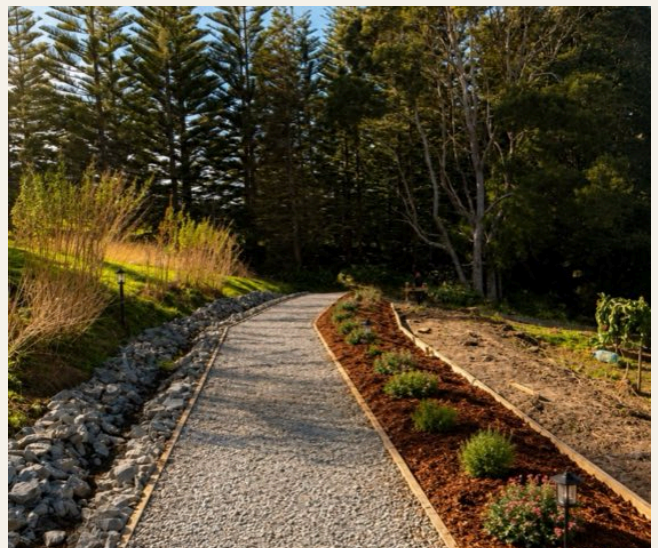

## Retaining and level control

Wall scope depends on retained height, surcharge, drainage and ground condition.

## Deck and privacy work

Outdoor living areas built around access, height, drainage and daily use.

## Garden paths and finishing

Paths, planting edges and hardscape details that make outdoor areas usable.

# A clear process reduces guesswork before construction starts.

The aim is not to price from assumptions too early. BT Garden LTD checks the site constraints first, then confirms a practical build scope.

**01****Send project details**

Suburb, site photos, rough size, current surface and project type.

**02****Review site constraints**

Access, slope, drainage, ground condition, boundaries and load requirements.

**03****Confirm scope and quote**

Materials, construction method, assumptions and timing are clarified.

**04****Build and finish**

Construction is completed to the agreed scope with practical site clean-up.

**Note**

For retaining walls, decks, concrete areas and resin-bonded surfacing, substrate condition and site drainage matter. Online estimates are early guidance only; final scope and price require site review.

# Best suited to clients who want a practical site-first build.

BT Garden LTD is a fit for outdoor projects where the finished result depends on more than one trade or site condition: excavation, drainage, levels, structure and surface finish.

## SiteWise Green

Supports a more systematic approach to safety and site planning.

## LBP builder on the team

Useful when decks, retaining details and practical construction decisions need closer review.

## Certified excavator operator

Earthworks, drainage preparation, backcut and access planning can be considered early.

## Local Auckland focus

Service area includes Auckland, North Shore and nearby suburbs, depending on project scope and access.

**REQUEST A SITE ASSESSMENT**

# Send photos first. Build decisions come after the site is understood.

Include the suburb, project type, site photos, rough dimensions and any drainage, slope or access concern. BT Garden LTD will confirm the next practical step.
